Description:
About SME Big Data
Big data solutions include a wide range of hardware, software, and services required for processing and analyzing structured and unstructured data that is too big for traditional data processing tools to manage. These data are generated by various sources such as mobile devices, digital repositories, and enterprise applications and range in size from terabytes (10^12 bytes) to petabytes (10^15 bytes) and even exabytes (10^18 bytes). Due to the considerably large size of big data, it is difficult for SMEs to manage and analyze the data using existing traditional data processing tools. Big data solutions are being used for a wide range of applications such as conversation analysis in social networking websites, fraud management in the BFSI sector, and disease diagnosis in the Healthcare sector. Due to the increasing need for big data solutions, the Global SME Big Data market is expected to witness rapid growth during the forecast period. TechNavio's analysts forecast the Global SME Big Data market will grow at a CAGR of 42.94 percent over the period 2013-2018.
